My First WordPress Blog

Create a WordPress Blog
Card 1 of 8
I am learning: Creating WordPress Blog
1. Go to https://portal.azure.com and login with your verified DreamSpark account
3. Click Web App, enter a unique URL for your blog. Then enter a unique name in the AppService Plan and the Resource Group. Change the location to where you are and leave all other settings to their default values.
4. Click Database, then Legal Terms, then click OK to all open blades, and now click Create
5. You’ll see the following notifications and after a few minutes your new blog will be ready to go.

Congratulations you have now deployed your first WordPress blog!
