My First Kodu Game

Make Kodu shoot
Card 4 of 5
I am learning: Game programming with Kodu
1. **Double-click on the Kodu Game Lab icon** to start Kodu on a Windows PC.
2. **Click on New World** to start a blank new world, or **Load World** to work on a previously saved world.
3. **Switch to the Object Tool and then click** on the expanded surface of your world. This brings up the radial menu of all the different objects you can use in Kodu Game Lab.

4. **Pick Kodu from this menu** and then Kodu will appear in the game world.
5. **Right-click on Kodu** to bring up the object menu, **choose Program**.

6. **Click the + sign by the WHEN section** and then **choose Keyboard** from the radial menu.
7. **Click the + sign by the WHEN section by the keyboard Kode tile, choose Misc from the radial menu, and then choose Space from the nested radial menu.**

8. **Click the + sign by the DO section after the keyboard and WASD Kode tiles you added and then choose Shoot from the radial menu.**

9. **Click the + sign by the DO section by the Shoot Kode tile, and then choose either Blips or Missiles (try one, then the other!)**

10. **Click Esc on your keyboard to exit the programming mode.**

11. **Click the Play button and then try shooting projectiles with the Space bar!**

Congratulations! You can make Kodu bots shoot with Kode!
